Multi-protection impregnation

Power Formula

Description

STEN Experts Multi-protection impregnation is a **breathable 2-phase impregnation concentrate** for all types of **porous or absorbent mineral substrates**. The product is transparent and does not change the appearance. Treated surfaces do not become slippery or sticky. **Self-organizing non-stick components** give the surface **an invisible water-repellent and dirt-repellent effect**. Dirt is less likely to enter the pores and is easier to clean. The impregnation **retains its effect for 5 - 8 years**, even if the beading effect on the surface wears off.

Areas of application

For impregnation of **all absorbent, open-pored substrates made of stone, natural stone, concrete or cement**. Ideal for terrace, facade, roof tiles, carport, concrete, paving stone and sandstone. Not suitable for dense and non-absorbent materials.

Usage

First thoroughly clean the surface to be impregnated. **Dilute** the impregnating concentrate **with water 1:9 to 1:10 as required and mix well**. At a mixing ratio of 1:9, an area of approx. 40 to 60 m² can be protected. The impregnation can be applied with **suitable tools** such as **cotton strip, rollers or spraying equipment**. During the drying time of 4 to 8 hours, the surface must not be wet or walked on.

Notice

The temperature of the surface to be impregnated must be >5 °C. When applying, make sure that the product is evenly distributed over the surface to avoid puddle formation and adhesive effects.

At a mixing ratio of 1:9 with water, an area of approx. 40 to 60 m² can be protected. In general, depending on the absorbency of the material, the impregnating concentrate can be diluted with water from 1:9 to 1:10.

The product is not dangerous for plants or lawn surfaces.

The product can be used on marble. Be careful with polished surfaces. Always make a small sample on a not well visible place.

Pets should be kept away from the treated area during impregnation. Once the process is finished and the surface is dry there is no danger to your pets.

Keep out of the hands of children. Read label and product information before use.

Technical details

Contains: < 1% Hexadimethylammonium chloride; < 0.5% Aminopropyltriethoxysilane

ph-value: 8

Density: 0,95 g/cm³

Appearance: White liquid

Odor: Weak

Ecology

The impregnating product contains **no solvents and no biocide.**
